- ❑ **FEATURES AND BENEFITS OF ADDITIVE MANUFACTURING**
- ❑ **LIMITS AND CHALLENGES OF ADDITIVE MANUFACTURING**
- ❑ **GENERAL ADDITIVE MANUFACTURING APPLICATIONS**

# WHAT IS ADDITIVE MANUFACTURING?

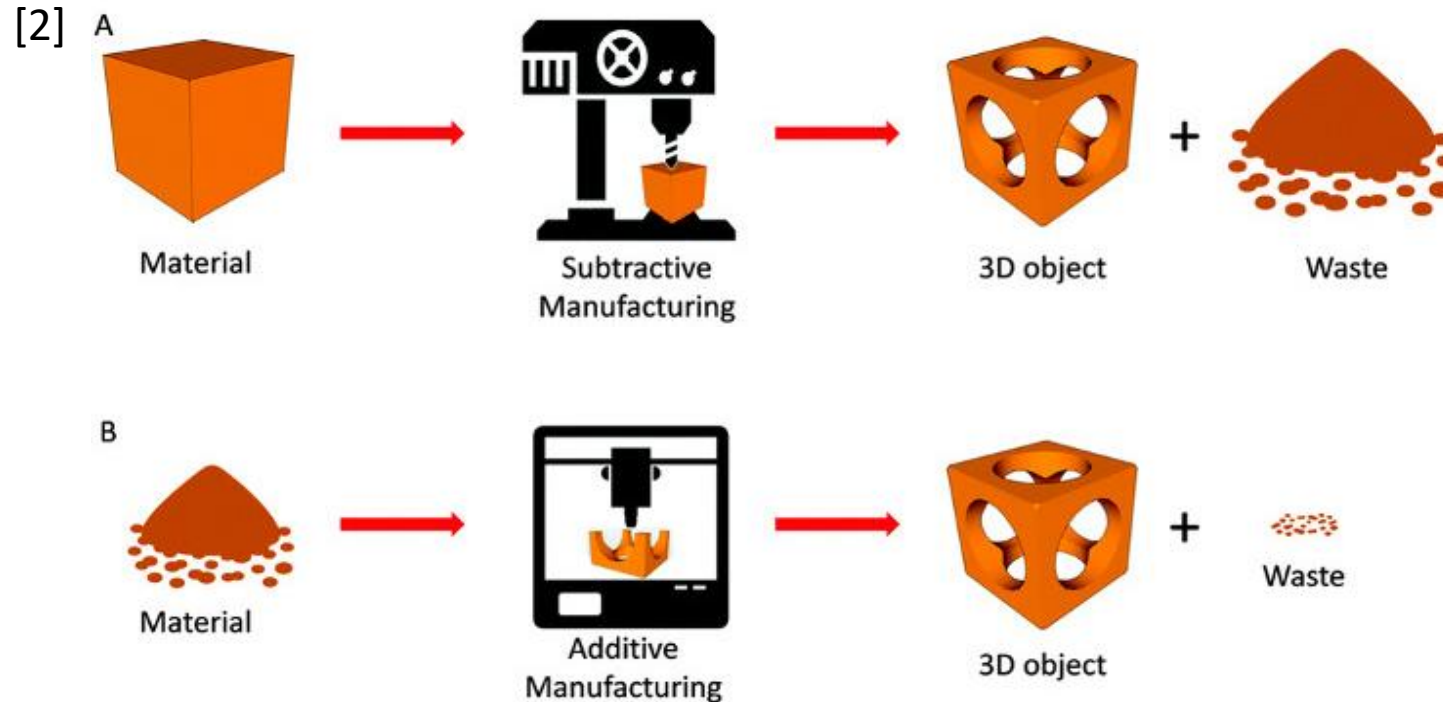

Also known as **3D printing**

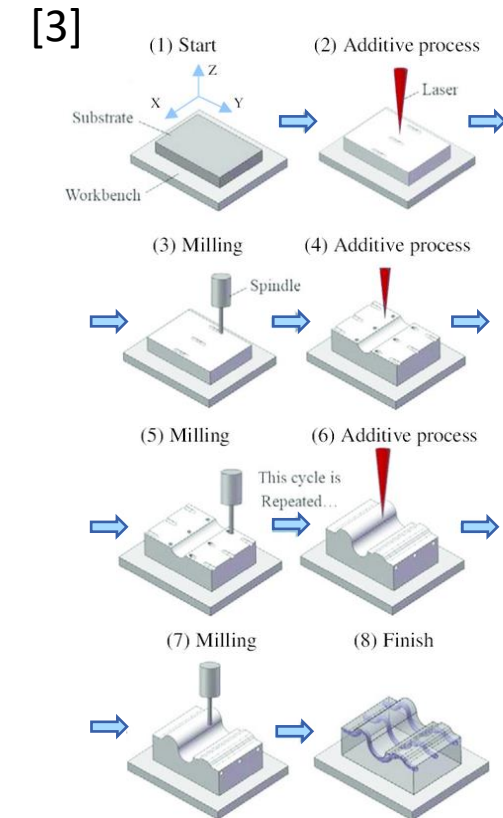

The process of joining materials to produce parts or objects from 3D model data, typically **layer by layer**, as opposed to **subtractive and forming manufacturing** methods [1].

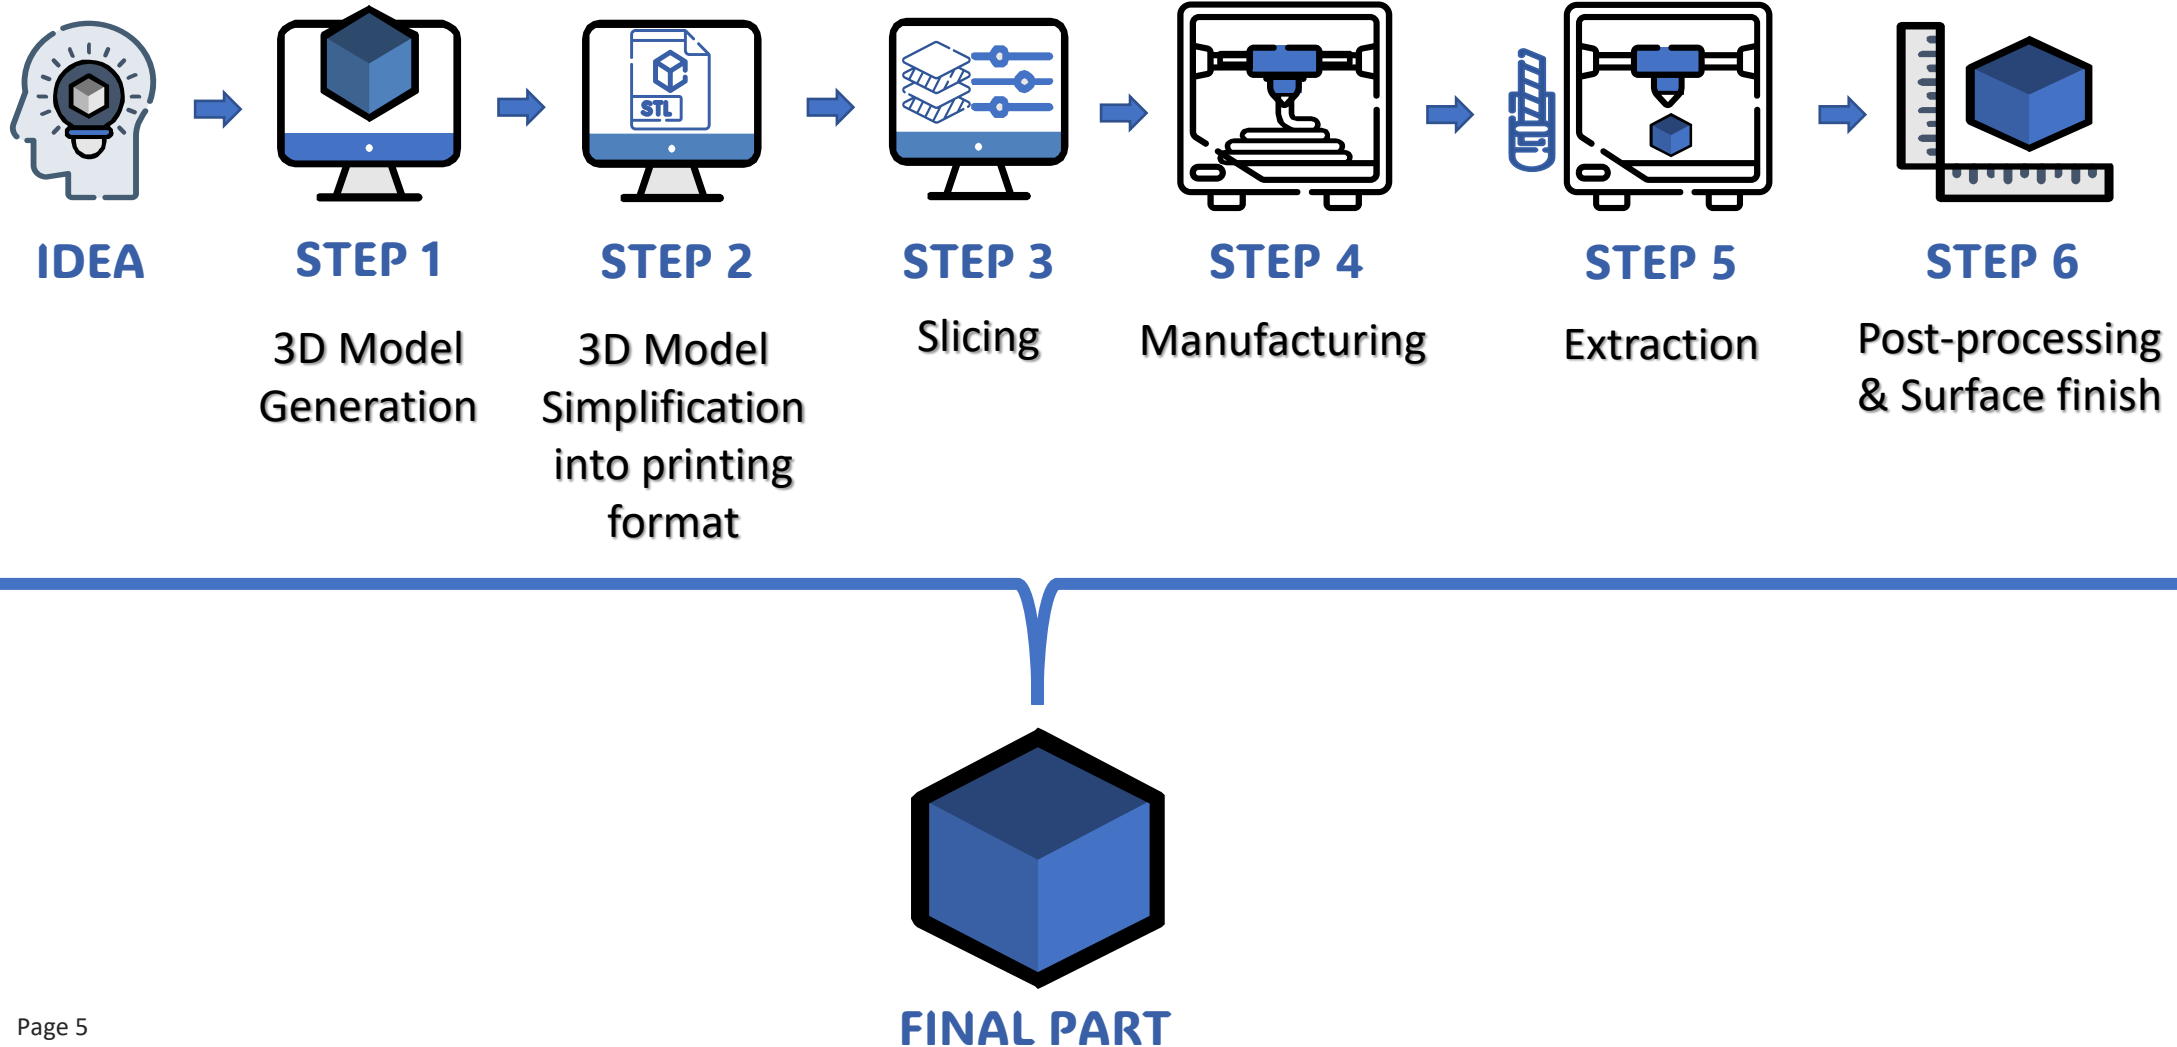

# ADDITIVE VS SUBTRACTIVE MANUFACTURING

But... they are not mutually exclusive!!

# BASIC STEPS OF ANY ADDITIVE MANUFACTURING PROCESS

# STEP 1: 3D MODEL GENERATION

## 1 CAD

## 2 3D SCAN + REVERSE ENGINEERING

Among others...

# STEP 2: 3D MODEL SIMPLIFICATION INTO PRINTING FORMAT

**ACCURACY**  
**FILE SIZE**

- STL
- PLY
- OBJ
- 3MF

**DATA STORAGE**

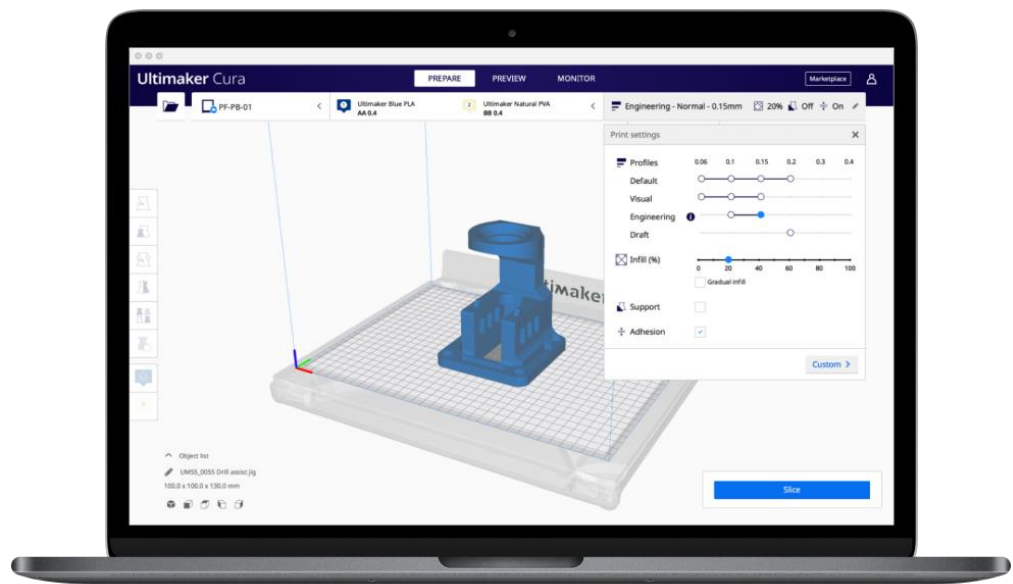

- Geometry (Mesh)
- Geometry, texture & colour
- Geometry, texture, colour & material
- Geometry, texture, colour, material, manufacturing method,...

# STEP 3: SLICING

## PARAMETERS DEPENDING THE METHOD OF MANUFACTURING

- LAYER HEIGHT
- INFILL
- WALL THICKNESS
- STRATEGY PATH
- SUPPORTS
- MATERIAL
- SPEED
- ...

MECHANICAL PROPERTIES  
SURFACE FINISH (STAIRCASE EFFECT)  
TIME OF PRINTING  
MATERIAL CONSUMPTION

# STEP 4: MANUFACTURING

**DIRECT ENERGY DEPOSITION (DED)**

**VAT PHOTOPOLYMERISATION (VPP)**

**BINDER JETTING (BJT)**

**MATERIAL EXTRUSION (MEX)**

**MATERIAL JETTING (MJT)**

**POWDER BED FUSION (PBF)**

**SHEET LAMINATION (SHL)**

# STEP 5: EXTRACTION

# STEP 6: POST-PROCESSING & SURFACE FINISH

## THERMAL

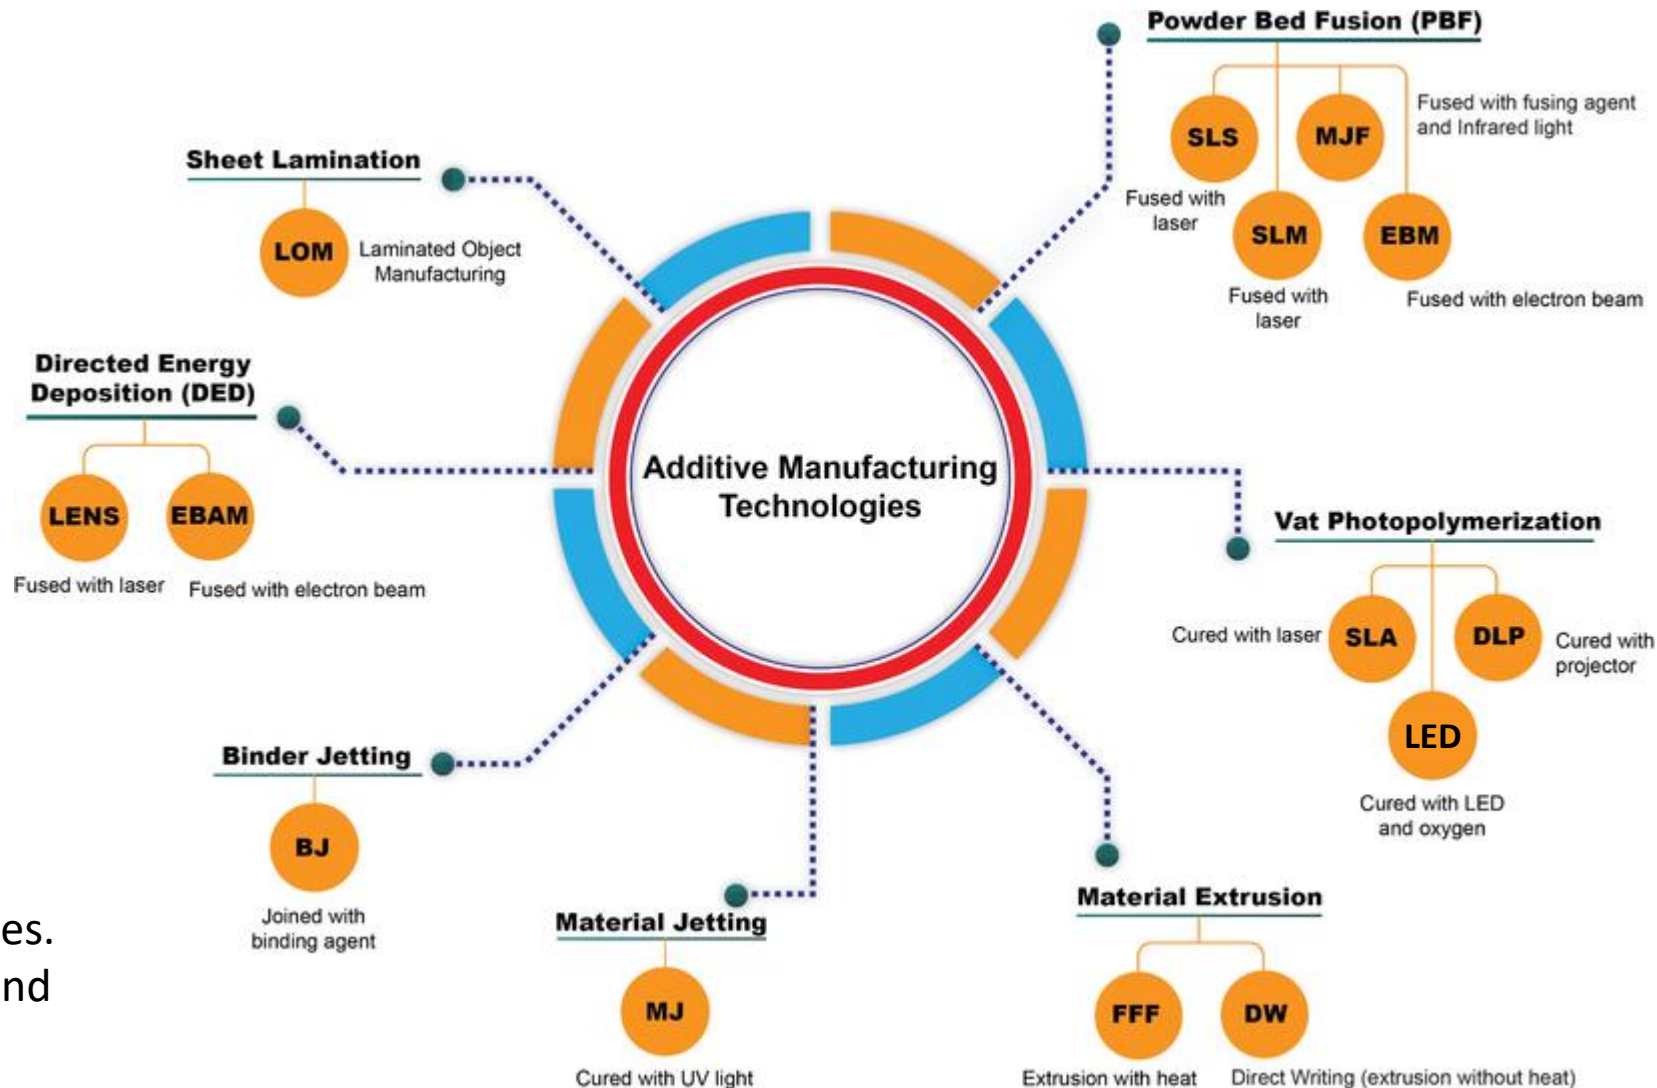

## CHEMICAL

## SURFACE FINISH

# CLASSIFICATION OF AM TECHNOLOGIES: THE 7 CATEGORIES

ISO/ASTM  
52900:2021

“Additive manufacturing. General principles. Fundamentals and vocabulary.”

CATEGORIES	TECHNOLOGIES	PRINTED "INK"	POWER SOURCE	STRENGTHS / DOWNSIDES
Material Extrusion	Fused Deposition Modeling (FDM)	Thermoplastics, Ceramic slurries, Metal pastes	Thermal Energy	<ul style="list-style-type: none"> <li>• Inexpensive extrusion machine</li> <li>• Multi-material printing</li> <li>• Limited part resolution</li> <li>• Poor surface finish</li> </ul>
	Contour Crafting			
Powder Bed Fusion	Selective Laser Sintering (SLS)	Polyamides /Polymer	High-powered Laser Beam	<ul style="list-style-type: none"> <li>• High Accuracy and Details</li> <li>• Fully dense parts</li> <li>• High specific strength &amp; stiffness</li> <li>• Powder handling &amp; recycling</li> <li>• Support and anchor structure</li> <li>• Fully dense parts</li> <li>• High specific strength and stiffness</li> </ul>
	Direct Metal Laser Sintering (DMLS)	Atomized metal powder (17-4 PH stainless steel, cobalt chromium, titanium Ti6Al-4V), ceramic powder		
	Selective Laser Melting (SLM)			
	Electron Beam Melting (EBM)	Electron Beam		
Vat Photopolymerization	Stereolithography (SLA)	Photopolymer, Ceramics (alumina, zirconia, PZT)	Ultraviolet Laser	<ul style="list-style-type: none"> <li>• High building speed</li> <li>• Good part resolution</li> <li>• Overcuring, scanned line shape</li> <li>• High cost for supplies and materials</li> </ul>
Material Jetting	Polyjet / Inkjet Printing	Photopolymer, Wax	Thermal Energy / Photocuring	<ul style="list-style-type: none"> <li>• Multi-material printing</li> <li>• High surface finish</li> <li>• Low-strength material</li> </ul>
Binder Jetting	Indirect Inkjet Printing (Binder 3DP)	Polymer Powder (Plaster, Resin ), Ceramic powder, Metal powder	Thermal Energy	<ul style="list-style-type: none"> <li>• Full-color objects printing</li> <li>• Require infiltration during post-processing</li> <li>• Wide material selection</li> <li>• High porosity on finished parts</li> </ul>
Sheet Lamination	Laminated Object Manufacturing (LOM)	Plastic Film, Metallic Sheet, Ceramic Tape	Laser Beam	<ul style="list-style-type: none"> <li>• High surface finish</li> <li>• Low material, machine, process cost</li> <li>• Debubing issues</li> </ul>
Directed Energy Deposition	Laser Engineered Net Shaping (LENS) Electronic Beam Welding (EBW)	Molten metal powder	Laser Beam	<ul style="list-style-type: none"> <li>• Repair of damaged / worn parts</li> <li>• Functionally graded material printing</li> <li>• Require post-processing machine</li> </ul>

# MATERIAL EXTRUSION (MEX)

Material extrusion is an AM process where the material is selectively deposited through an extruder or an orifice.

**MOST KNOWN**  
**90% market of**  
**“Desktop Printers”**  
**30% professional**  
**market**

Identification according to ISO/ASTM 52900:2021

# VAT PHOTOPOLYMERIZATION (VPP)

## ALSO KNOWN AS STEREOLITHOGRAPHY (SLA)

**First** AM process to be successfully commercialized.  
(**Chuck Hull** – **1980s**)

Vat photopolymerization uses a light source to activate a photopolymer that hardens when hit by the right wavelength and intensity of light.

# VAT PHOTOPOLYMERIZATION (VPP)

PHOTOPOLYMERS**

Green part

# VAT PHOTOPOLYMERIZATION WITH CERAMICS (VPP-UVL/C)

## PRINTING PROCESS

## ADVANTAGES

High density sintered parts  
(guaranty of good mechanical  
properties)

High dimensional accuracy

Smooth surface finish

# BINDER JETTING (BJT)

This process of AM is the one that gave the **3D printing** name due to its similarity with the **paper printers**

Binder Jetting consists in a liquid binding agent (binder) is selectively deposited to join powdered materials.

## ADVANTAGES

Accuracy

Full-colour and multi-material parts

Support structures

## LIMITATIONS

Poor mechanical properties

Slow printing process

Material limitations

# POWDER BED FUSION (PBF)

Powder Bed Fusion achieve 3D manufacturing by **melting selectively a powdered material** through a **thermal energy source**.

# POWDER BED FUSION (PBF)

## Selective Laser Melting (SLM)

- Fused with laser. Homogeneous metallic powder of the same metal

## Direct Metal Laser Sintering (DMLS)

- Fused with laser. Metallic Alloys powder.

## Selective Laser Sintering (SLS)

- Fused with laser. Non-metallic materials powder

## Electro Beam Melting (EBM)

- Fused with Electro Beam. Metallic powder

## Multi-Jet Fusion (MJF)

- Fused with fusing agent and infrared light.

# POWDER BED FUSION (PBF)

“MJ + SLS”

## Multi-Jet Fusion (MJF)

# SHEET LAMINATION (SHL)

ALSO KNOWN AS LAMINATED OBJECT MANUFACTURING (LOM)

Copyright © 2008 CustomPartNet

In this process, the material, in form of sheets, is bonded together to form an object. For that, each sheet is cut to shape with a knife or laser.

## HOW TO BOND?
